INFINISKIN TREATMENTS POPULAR IN BEVERLY HILLS, NOW AVAILABLE AT LUPO CENTER FOR AESTHETIC AND GENERAL DERMATOLOGY IN NEW ORLEANS, LA

Fractional Radiofrequency microneedling for tighter, smoother skin is quickly becoming the new trend in the aesthetic industry and major cities globally

New Orleans, LA – If you are looking for a non-invasive facelift, neck lift, to smooth acne or other scarring, reduce pore size, or even to create a flawless complexion that doesn't require makeup, you can now find the INFINIskin treatment here in New Orleans. INFINIskin treatments make it possible to have a more youthful and smooth appearance without having to worry about missing work or social events. A face plus neck treatment takes approximately 45 minutes, and patients can wear makeup the next day to cover any redness. The treatment is tolerable and sought out by all ages, both male and female. Because INFINI applies energy below the surface of the skin, it can safely treat all skin types, unlike many other devices.

"I took a Friday off from work, went for the treatment in the morning, numbing cream was applied for some time, then the device was used to deliver energy through very fine insulated needles for about 45 minutes. While it was uncomfortable, it is better than surgery or lasers, and by Saturday night, I was able to apply makeup and go out. I could never do that with surgery. It has been about 5 weeks and my skin is beginning to tighten, people are noticing and saying I look younger and I am even wearing less makeup due to the natural even skin tone and smaller pores!" says an INFINIskin treatment patient.

The INFINI device is quickly becoming the "hot trend" in the industry. The innovative combination of radiofrequency and microneedling to stimulate the natural regrowth of collagen and elastin is gaining accolades worldwide.
